

# Cannot enter scores on palm pilot

## Frequently Asked Question:

Cannot enter scores on palm pilot

## Answer:

Sensory Profile is used in recording and maintaining child background data and responses for administered assessments within the Sensory Profile Desktop and the Sensory Profile PDA application (if applicable). When an assessment has been scored, the Sensory Profile can generate numerous reports.

The system provides a method for clinicians and other designated representatives to enter the information that has been recorded on the paper-based Sensory Profile forms in the check boxes on the form shown on the Sensory Profile Desktop. The clinician or designated user may score the administered assessment and generate and print reports.

If the Palm device shuts or stops functioning when entering scores, check the battery charge or replace the battery. If the problem continues, uninstall and reinstall the software, then run HotSync again to update the Palm.

If you have errors or lose data, make sure that you have a good install. Remove the software on the Palm, and retry the install.

The Sensory Profile is no longer available for purchase. Please update your software to the enhanced Sensory Profile Select Scoring Assistant.
