

Cannot view entire screen

Frequently Asked Question:

Cannot view entire screen

Resolution:

WAIS-III/WMS-III/WIAT II Writer requires a 2 MB video card capable of 800x600 resolution (16-bit color) and small fonts selected. If your system does not have its display set to these configurations, the program will not function properly. The screen resolution of 800x600 ensures that the entire program screen is visible for entering data and scores.

To change screen display settings:

- Begin at the desktop with all open programs closed.
- Right-click the mouse on a blank section of the desktop and select Properties.
- Click the Settings tab.
- If the display and desktop slider bars are set to other than 800x600, move the bars until 800x600 is set. (Note: some Windows 95 screens will show only one slider bar; this is normal for your system.)
- If color is not set to 16-bit color, click the arrow at Color Palette and select 16-bit colors.
- Font Size must be Small Fonts; change if set to Large Fonts or Other.
- Click OK to save the changes.

If continues to be too large, change the Windows Display Properties to reflect Windows Standard Appearance:

- Begin at the desktop with all open programs closed.
- Right-click the mouse on a blank section of the desktop and select Properties.
- Click the Appearance tab.
- Click the Scheme drop-down menu and select Windows Standard.
- Make sure the scheme is not Large or Extra Large.
- Click OK to save the changes.

After making the required changes to the settings, reboot the computer and launch WAIS-III/WMS-III/WIAT II again.

On some networked systems the user may not have user rights to change the Display settings. Please contact your network administrator if you cannot access the Display Properties window.
