

Are my scores derived by comparing them to the other students who took the exam on the same date as me?

Frequently Asked Question:

Are my scores derived by comparing them to the other students who took the exam on the same date as me?

Answer:

Your percentile rank scores are based on the current norm group each time you take the PCAT. The current norm group is defined as all first-time examinees who took the test between October 2004 and May 2007. Your scaled scores are based on the number of core (live) items that you answered correctly for each subtest. Each multiple-choice subtest is calculated separately.
