Troubleshooting GRADE/GMADE Server Issues

If you are encountering difficulties connecting to a GRADE or GMADE database on a <u>server</u>, check the following:

If possible, install GRADE or GMADE on the server itself and verify that it can connect to the database. <u>This article details how to set the GRADE/GMADE database settings.</u>

In the examples below, the instance name is **SQLEXPRESS**

Open the SQL Server Configuration Manager and verify that both the **SQL Server Browser** service and **SQL Server** service for the instance are running. Both services must be running or else the software will be unable to connect.

🛐 SQL Server Configuration Manager			
<u>File Action View Help</u>			
 SQL Server Configuration Manager (Local) SQL Server 2005 Services SQL Server 2005 Network Configuration SQL Native Client Configuration 	Name	State	Start Mode
	SQL Server (QLOCALINSTANCE)	Running	Automatic
	SQL Server (SQLEXPRESS)	Running	Automatic
	BQL Server Browser	Running	Automatic
	<		- F

In addition, the TCP/IP Protocol must be enabled for the instance:

🛐 SQL Server Configuration Manager			
<u>File Action View H</u> elp ← → 2 □ @ → 2			
 SQL Server Configuration Manager (Local) SQL Server 2005 Services SQL Server 2005 Network Configuration Protocols for QLOCALINSTANCE Protocols for SQLEXPRESS SQL Native Client Configuration 	Protocol Name	Status	
	ফ Shared Memory ফ Named Pipes	Enabled Enabled	
	TCP/IP	Enabled	
	\$∓VIA	Disabled	

In addition to being enabled, both the client and the server must be using the same port. The default port for SQL Server is 1433, if you are using SQL Server Express you will need to manually set the port number using the instructions.

To verify the settings, double-click on **TCP/IP**.

In the "Protocol" tab, **Enabled** should be set to 'Yes' (see left side, below)

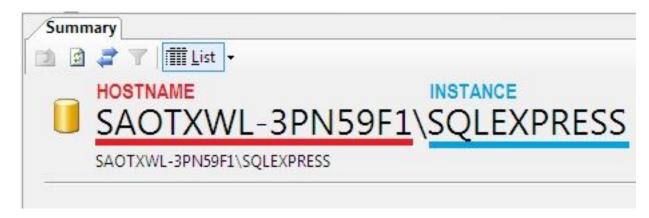

In the "IP Addresses" tab, underneath **IP1**, Active and Enabled should be set to "Yes." It is recommended that the default SQL Server port of 1433 be used for the TCP Port (see right side, below)

TCP/IP Properties		? 🗙	т	CP/IP Properties		? 🗙
Protocol IP Addresses				Protocol IP Addresses		
General				IP1		
Enabled	Yes	-		Active	Yes	-
Keep Alive	30000			Enabled	Yes	
Listen All	Yes			IP Address	fe80::5c80:14fe:6e9a:6c51%2	1
No Delay	No			TCP Dynamic Ports	0	
				TCP Port	1433	=
				E IP2		

Changes made in the SQL Server Configuration Manager will not be applied until the SQL Browser and SQL Server services are restarted.

Assuming port 1433 is being used, make sure that TCP/IP port 1433 and UDP port 1434 are not being blocked by any firewalls.

The hostname and instance name can both be found near the top of the SQL Server Management Studio window:
