

How long should CELF-IV take to administer

Frequently Asked Question:

How long should CELF-IV take to administer?

Answer:

CELF-IV helps you quickly and accurately identify and diagnose language disorders. The average administration time is between 30 and 60 minutes for impaired children. Using the CELF-IV four step assessment approach, you may determine early on that the child is not impaired and stop the testing. This dramatically reduces the total administration time.
