

Runtime error 10

Error Description:

Runtime error 10

Resolution:

The CVLT-C Scoring Assistant installation installs certain Windows files during installation. If these files are later lost or modified, various system errors will occur during launching or running CVLT-C. Reinstalling the program does not help, because the CVLT-C installation will not overwrite a file when an existing version of that file is found. You will need to backup the CVLT-C database, delete the program folder, and reinstall with background applications closed.

1. Before you uninstall CVLT-C Scoring Assistant, backup the database if the data will be needed later:
 - a. If you are running CVLT-C, exit the program.
 - b. Use Windows Explorer to locate the folder {C:\ CVLT-C}. This is the default installation location.
 - c. Locate and highlight the database files; these files have the extension *.MDB.
 - d. Click Edit, Copy.
 - e. Display the contents of the drive and folder to which you want to copy the files.
 - f. Click Edit, Paste.
1. Use Windows Explorer or My Computer to delete the program folder {C:\CVLT-C}.
2. Reinstall with background applications closed.

If the problem happens when printing to a network printer, please attach a local printer and attempt again. You can also capture the printer port in Windows 9.x to redirect the print jobs to the network printer port.
