

Saved reports do not open correctly in word processor

Frequently Asked Question:

Saved reports do not open correctly in word processor

Resolution:

If the report does not open properly, it may be necessary to re-install the third party word processor application. Make sure that all data files for the word processor are backed up prior to uninstalling and re-install the word processing program.

If you receive error messages similar to ""Error in text filter"" or ""Cannot write to file (1-d05)"" when trying to save a report to file, check your word processor to ensure it can open documents prepared by other word processing programs. WAIS-III/WMS-III/WIAT II Writer can save reports in the following formats:

- Rich Text Format (*.RTF)
- Word document (*.doc)
- Text Document (*.txt)

If you can only open the file in Microsoft WordPad, your MS Works does not have the correct import filters and cannot recognize the file types. Please contact your local IT department, MS Works support, or the computer manufacturer support line for further assistance.
