Cannot load or register custom control threed16.ocx in main ( )

Error Description:

Cannot load or register custom control threed16.ocx in main ( )

Resolution:

If you encounter the error "Cannot load or register custom control threed16.ocx in main ( )", you will need to reinstall CMS-SA with an updated version of the software. Before you reinstall, 7 files should be renamed on your computer. These files are located in the "C:\Windows\System" or "C:\Windows\System32" directory on your hard drive. Rename the files to .OLD. and make sure they are all in the same directory. If you are on a dual boot system, please make sure you rename these files on the secondary drive as well.

The seven files are:

- MSMASK16.OCX
- COMDLG16.OCX
- THREED16.OCX
- VSVIEW2-.OCX
- RESIZE16.OCX
- THREED32.OCX
- THREED20.OCX

Renaming the above files and reinstalling CMS-SA, with an updated version of the software should resolve the issue previously encountered.
