

Can I still calculate supplemental quartile scores for Target Words and Reading Speed if reversal was used?

Frequently Asked Question:

Can I still calculate supplemental quartile scores for Target Words and Reading Speed if reversal was used?

Answer:

Quartile scores can be calculated only for examinees who stayed within their grade-appropriate item set. Age-based scores are not available because students of the same age may be in different grades (and administered different item sets) and would thus be reading different sentences.
