The Microsoft Jet database engine cannot find the input table or query 'tblExaminerList'. Make sure it exists and that its name is spelled correctly.

Error Description:

The Microsoft Jet database engine cannot find the input table or query 'tblExaminerList'. Make sure it exists and that its name is spelled correctly.

Resolution:

You may receive this error message if PsychCorpCenter cannot find the table or the query in the database. This error can also occur if the database has been deleted or renamed. At this point, the database has become corrupt and must be replaced by a new one, either manually or through repair.

To troubleshoot this behavior, do the following:

1. Close PsychCorpCenter
2. Access the database at C:\TPC\PsychCorpCenter\Data

3. Save the AS_DATA.mdb to another location away from C:\TPC\PsychCorpCenter\Data folder.
4. Ensure only AS_SETUP.mdb remains in the data folder. (Delete AS_DATA.mdb if you copied it.)
5. Restart PsychCorpCenter (A new database will be created automatically)

If this does not resolve your issue, please contact technical support as you may have a corrupted Microsoft component that is preventing the installer from fully installing the correct files to their proper locations. Technical support may be reached M-F at (800) 249-0659 from 7AM - 6PM CST
