If a participant has a set loss error for condition one sorting into 3 groups, but labels the 3 groups correctly, how do you classify the description score, is it 3 incorrect descriptions?

Frequently Asked Question:

If a participant has a set loss error for condition one sorting into 3 groups, but labels the 3 groups correctly (animals, transportation, air), how do you classify the description score, is it 3 incorrect descriptions?

Answer:

No credit for description is allowed. The examinee would not have any incorrect descriptions if the descriptions themselves were correct. These would be counted as a noncredit description.
