

Do I administer 1 or 3 probes for Progress Monitoring with RCBM?

Within the Progress Monitor software, administering the R-CBM probes falls into one of two categories:

- When the schedule frequency exceeds once every two weeks, we recommend using 1 R-CBM probe and entering the score as the data point.
- When the schedule frequency is less than once every two weeks, we recommend using 3 R-CBM probes and entering the median score as the data point.

When administering Survey Level Assessments, administer 3 probes per grade level and enter the median as the data point.
