

Can I view all of interventions offered in AIMSweb Behavior?

Yes. The AIMSweb Behavior module provides a series of “filters” that can be used to view available interventions that are matched to problem behavior type. For example, problems in aggression would “filter” a different set of interventions than problems with distractibility or depression. These filters are also based on the type and level of the intervention (e.g., group or individual). See the AIMSweb Behavior Administration and Technical Manual for a complete description of how to select the filters.
