

User tries to launch Q Local and gets stuck at the initializing screen

Error document:

Show user that something in their machine is causing SQL Server a problem.

- 1) Verify standard OS, hard drive space & memory requirements are met
- 2) Verify screen resolution is at least 800 x 600
- 3) Edit the C:\Program Files\Pearson\Q Local System\Files\b.cfg file to use 127.0.0.1
- 4) Next time we have a W98SE initialization problem with 1.3.14, try the Server Network Utility and add the Named Pipes protocol. Restart the server and see if the initialization problem goes away. That's a lot less risky than uninstalling and reinstalling.
- 5) Verify TCP/IP entries in the network properties
- 6) For XP users, check the Windows Event Viewer
- 7) Use MSCONFIG as a diagnostic tool
- 8) View the HOSTS files for corruption
- 9) Check connectivity to internet (some machines require connectivity)
- 10) Check video card settings
