

I have prematurely hit the Complete button on my practice test. What can I do to change this and continue the test?

I have prematurely hit the Complete button on my practice test. What can I do to change this and continue the test?

The customer will have to purchase another test. Once **complete** is selected, that is the end of the test.

Customers may purchase access to an individual Practice Test for \$40.00, two Practice Tests for \$60.00, or they may purchase all three for \$80.00.

At any time while using a purchased Practice Test, you may choose to score an individual subtest. Once you choose to score a subtest, you will be able to continue to review the questions, and print out a Diagnostic Report as many times as you wish from your date of purchase until the next occurring January PCAT test date when the current annual test cycle ends.

However, you will not be able to score any subtest more than once. No refunds will be granted.

You will have access to the Practice Tests from the date of purchase until the end of the PCAT test cycle, which ends with the January PCAT test date.

The tutorial at <http://pearsonvue.com/athena/> has a small practice test that can be taken repeatedly.
