## Virtual Networks with Assist and Q Local

The authority working of ASSSSY submans have not been tooled using without authority. However, there is no measure for us to billions softwark versions of ASSSSY products will not work properly with virtual authority. That until they do with benchered authority. That until they do with benchered authority. That until they do with benchered authority.

Advise the customer: "If you are experiencing an issue with a network version of ASSIST software on a virtual network, please contact your network administrator."
