

Error while performing report counter operation. Log file says: "HASP has not been formatted...";

Error Description:

Q Local 2 error "Error while performing report counter operation." and the log file states:
"10/17/12 9:01:59 AM CDT

com.pearson.assessments.mtx.reportusage.control.HaspCtrlRMIIImpl getCache : SEVERE:
Severe error attempting to read HASP: HASP has not been formatted for read."

Problem:

The report counter is blank, this sometimes happens with new counters. The counter was not properly setup before it was shipped.

Resolution:

For Q Local 2 to properly read the counter, it must have a proper account number. **We cannot resolve this remotely.** The customer will need a new report counter. If they are a U.S. customer contact IS&CS and have a new report counter shipped to them. If this is a foreign customer they will need to contact their local office for a replacement counter.
